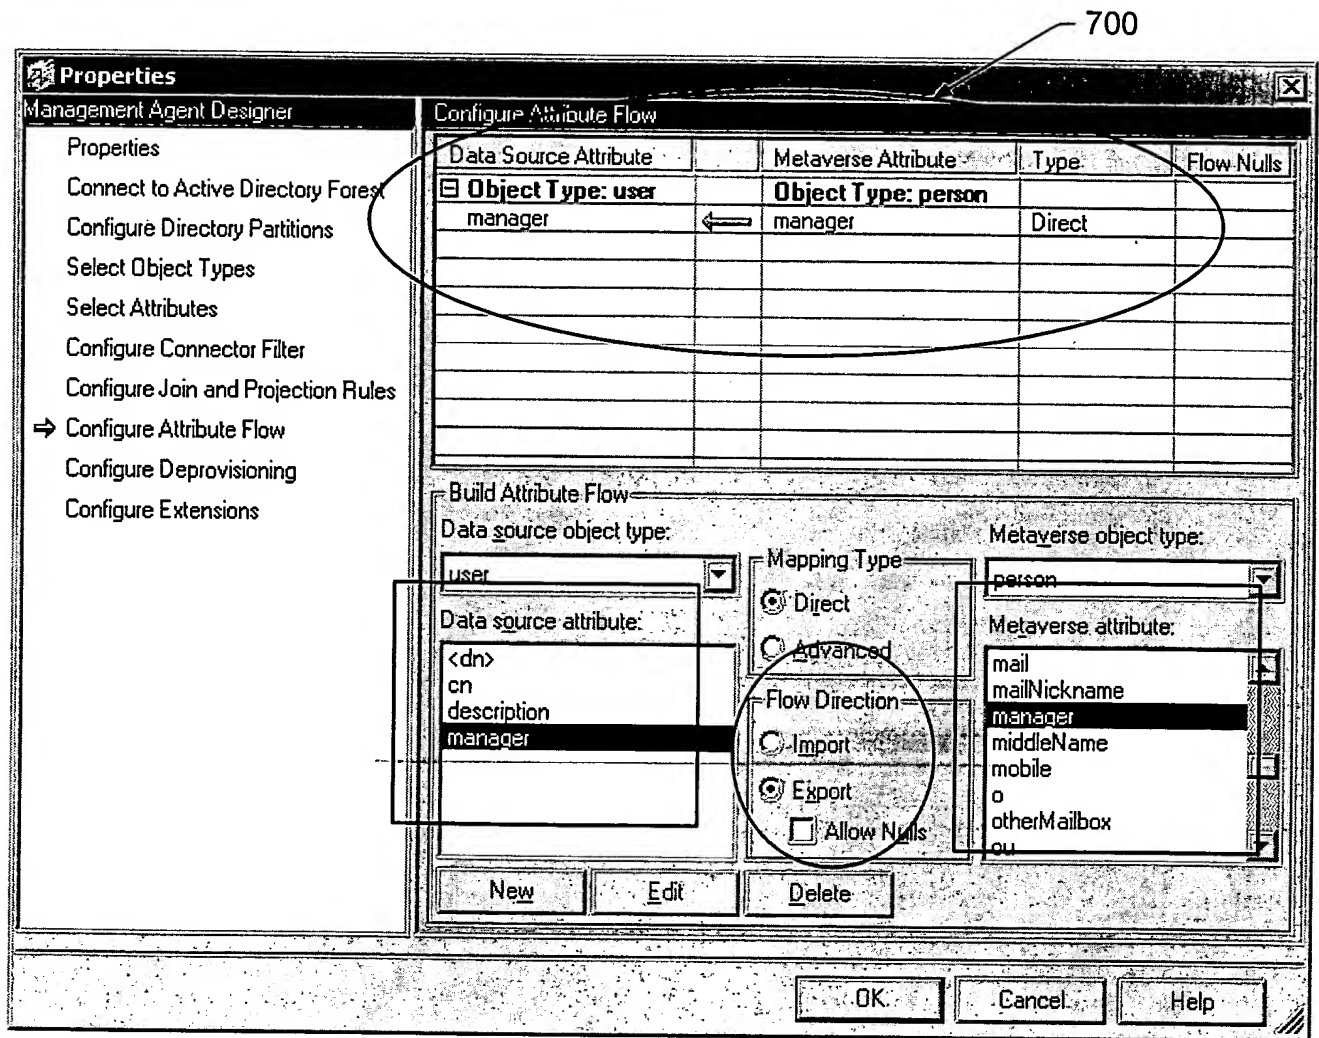

Fig. 7

Exemplary Method

800

The diagram shows an XML code block within a rectangular border. Several annotations with arrows point to specific parts of the code: 810 points to the opening tag of the first element, 812 points to the 'mv-object-type' attribute, 814 points to the 'type' attribute, 816 points to the 'cd-object-type' attribute, 820 points to the 'id' attribute, and 818 points to the 'src-attribute' element.

```
<import-attribute-flow>
  <import-flow-set mv-object-type="person">
    <import-flows mv-attribute="manager" type="ranked">
      <import-flow src-ma="{CAD5606B-04F5-4B7C-84F3-12B331344893}"
        cd-object-type="user"
        id="{F191E3D2-880F-4075-BF6C-9FF00D29AF4C}">
        <direct-mapping>
          <src-attribute>manager</src-attribute>
        </direct-mapping>
      </import-flow>
    </import-flows>
  </import-flow-set>
</import-attribute-flow>
```

Fig. 8

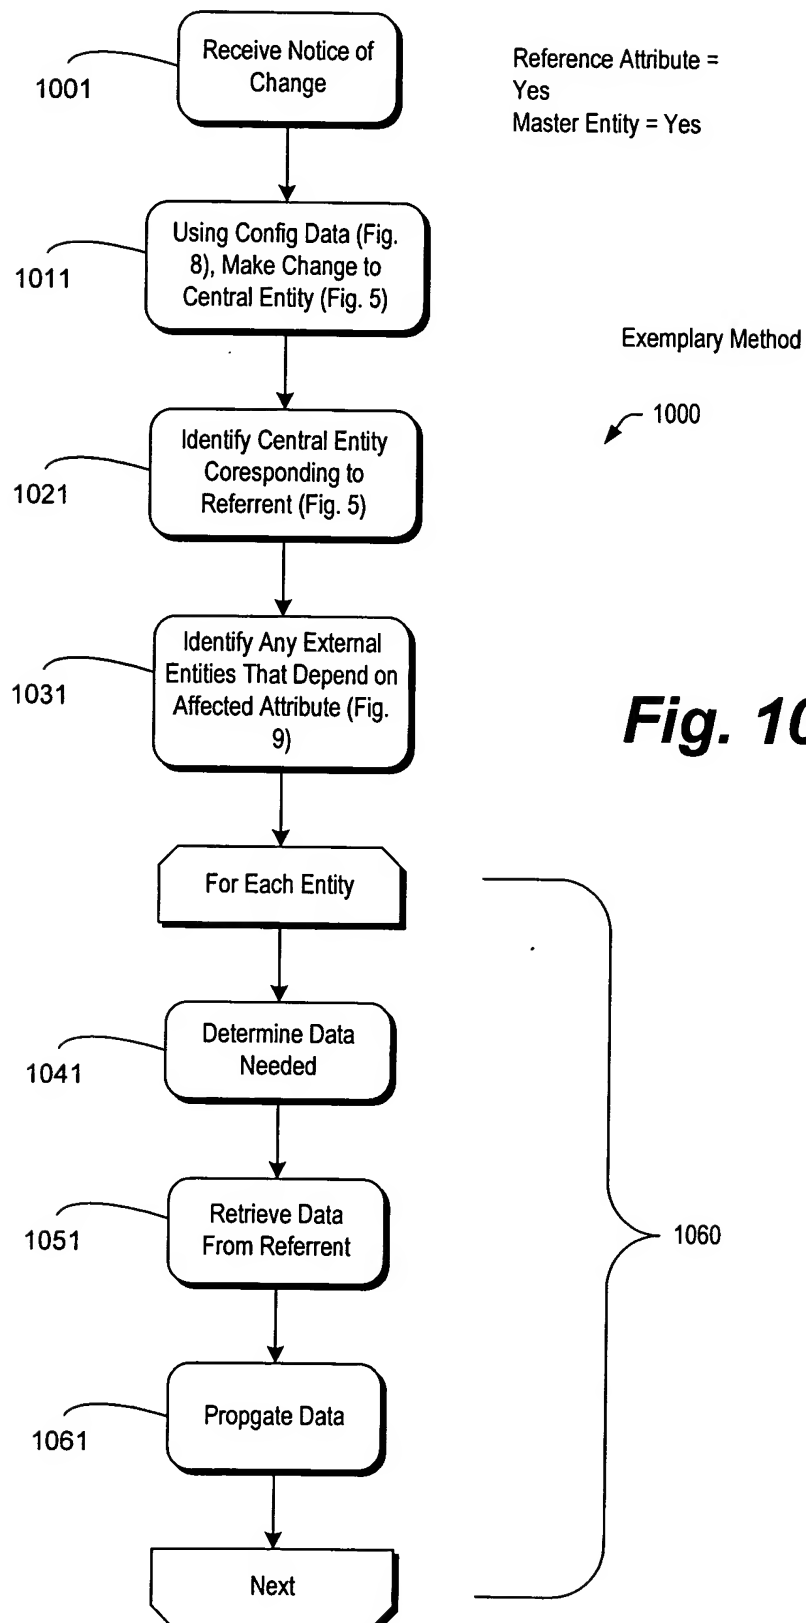

Exemplary Method

900

```
<export-attribute-flow>
  <export-flow-set cd-object-type="user"
    mv-object-type="person">
    <export-flow cd-attribute="manager"
      id="{D4688F56-C30E-4F26-AFA5-9EF6FCBBD58C}"
      suppress-deletions="true">
      <direct-mapping>
        <src-attribute>manager</src-attribute>
      </direct-mapping>
    </export-flow>
  </export-flow-set>
</export-attribute-flow>
```

The diagram illustrates an exemplary method 900 for propagating attributes between entities in correlated namespaces. The method is represented by an XML code block. Annotations point to specific parts of the code: 910 points to the opening <export-attribute-flow> tag; 912 points to the <export-flow-set> tag; 914 points to the mv-object-type="person" attribute; 916 points to the <export-flow> tag; and 918 points to the <src-attribute>manager</src-attribute> tag within the <direct-mapping> block.
